

Netflix Content Library

Data Insights & Strategic Recommendations

Analysis Tool: Excel & Power BI | Dataset: Netflix

Overview

Netflix's content library spans 8,807 titles. This report moves beyond surface-level counts to examine what the data reveals about the platform's content strategy, audience targeting, and potential growth risks.

Key Insights

- Movies account for nearly 70% of the catalog, while TV shows make up just 30%.
 - TV-MA is the most common content rating, indicating a strong focus on mature audiences.
 - The United States contributes the largest share of content, with India ranking second.
 - International Movies, Dramas, and Comedies dominate the platform's genre distribution.
 - Content additions accelerated rapidly between 2016 and 2020, before showing a decline thereafter.
-

Business Questions Raised by the Data

- Is Netflix becoming too dependent on mature audiences, limiting broader market reach?
 - Are certain genres receiving disproportionate investment while others remain underserved?
 - Does the post-2020 decline in content additions signal a strategic shift or a growth risk?
 - Could a higher share of TV shows improve long-term subscriber retention?
 - Is Netflix overly reliant on content from a few countries, creating geographic concentration risk?
-

Recommendations

- Expand family-friendly and youth-focused content to diversify audience reach beyond mature demographics.
- Balance the content portfolio by investing in underrepresented genres with demonstrated growth potential.
- Investigate the decline in post-2020 content additions to determine whether it reflects deliberate optimization or an emerging growth risk.
- Increase investment in high-quality TV series, as episodic content typically drives stronger engagement and long-term retention.
- Continue expanding content production across more countries to reduce geographic concentration and strengthen global appeal.

Key Takeaway

The challenge for Netflix may no longer be building a larger content library. The challenge is building a smarter, more balanced one.

Sustainable growth is not just about adding more content. It is about understanding audience needs, managing risks, and making data-driven decisions that support long-term engagement.
